

# TrustnSafe SDK

*A Framework to Secure IoT & Embedded Products*

## In Brief

What could be worse than having your innovation stolen or seeing your product used to attack your customer's network ?

However, securing an embedded device can be a challenge due to constrained hardware & software, limited knowledges in cybersecurity technologies and a fast-changing market shaped by new regulations and customer expectations.

**TrustnSafe SDK** is a complete, portable & easy to use security framework designed to protect your MCU based products and fulfill requirements of new cybersecurity oriented regulations like the radio equipment directive 2014/53/EU or the Cyber Resilience Act.

### Complete

- Secure Bootloader
- Cryptographic Library
- Secure Key & Data Storage

### Portable

- Pure C source code
- Any ARM Cortex-Mx & Cortex-M3x
- Implements the Standardized PSA Interfaces

### Simple

- Secure by Default
- Comes with Provisioning Tools
- No Proprietary Toolchain Required

## Applications

Consumer  
Electronics

INDUSTRIAL  
INTERNET  
OF THINGS

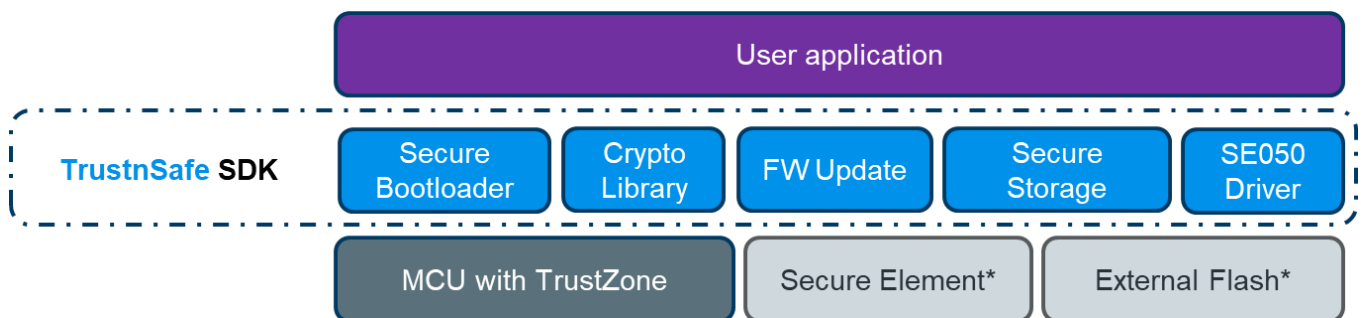

Security,  
Defense &  
Space

## Key features

Secure Bootloader	Crypto. Library	Supporting modules & tools
<ul style="list-style-type: none"><li>• Based on MCUboot</li><li>• Low footprint (&lt; 64 KB)</li><li>• FW verification using ECDSA P-256/384 or RSA 3072</li><li>• FW encryption using AES128/256</li><li>• Anti-rollback</li><li>• Powerloss resistant update</li><li>• Support FW update from an external flash</li><li>• Relies on PSA Crypto API</li></ul>	<ul style="list-style-type: none"><li>• Based on MbedTLS</li><li>• RSA 2048 to 4096</li><li>• ECDSA/ECDH</li><li>• AES 128/256</li><li>• Authenticated Encryption<ul style="list-style-type: none"><li>• AES-GCM/CCM</li><li>• ChaCha20-Poly1305</li></ul></li><li>• CMAC/HMAC</li><li>• TLS 1.2/1.3</li><li>• X509</li><li>• PSA Crypto interface</li></ul>	<ul style="list-style-type: none"><li>• Secure Storage<ul style="list-style-type: none"><li>• <i>ARM PSA ITS API</i></li></ul></li><li>• Secure Attestation<ul style="list-style-type: none"><li>• <i>ARM PSA Attestation API</i></li></ul></li><li>• Secure Update<ul style="list-style-type: none"><li>• <i>ARM PSA FWU API</i></li></ul></li><li>• Toolchain<ul style="list-style-type: none"><li>• <i>Image signing tool</i></li><li>• <i>Provisioning tool</i></li><li>• <i>PKI tool</i></li></ul></li></ul>

## SDK Architecture

## An all-in-one Software Development Kit

The **TrustnSafe SDK** includes all the software and guidance needed to secure your MCU based device against most common attack paths. Hence, it comes with an image signing tools which allows to protect your firmware signing keys. It also comes with simple and customizable PKI & provisioning tools that allow you to generate a small PKI and provision the issued certificates and keys into your devices.

### Evaluation Kit, Training & Consulting

TrustnGo offers an evaluation kit for the **TrustnSafe SDK**. This evaluation kit includes the full SDK with a pre-programmed Nucleo-F439ZI board from ST Microelectronics.
